

C++ Builder 11.2
ALEXANDRIA

Powerful, Full-Featured Windows Development

Design beautiful, intuitive user interfaces with award-winning and cross-platform frameworks on Windows and iOS

1 Productivity

Write, Compile, Package and Deploy Cross-Platform applications with the C++Builder development environment featuring a C++ integrated toolchain

2 Usability

Simple, Comfortable, Safe and Intelligent Interactions from concept to prototype of the envisioned app UI with C++Builder's visual design tools

3 Velocity

5x Development Productivity with our award-winning Visual Component Library for Windows and our FireMonkey (FMX) framework for multi-device work

4 Agility

High-Performance Native Applications improve developer productivity with hundreds of prebuilt components, Live On-Device Preview, and easy-to-customize layouts

C++ Builder 11.2

ALEXANDRIA

Powerful, Full-Featured Windows Development

C++Builder® is an advanced IDE for modern C++, with high-productivity libraries that help developers quickly build high-performance native apps for Windows and iOS

Modern C++17

Featuring a Clang-enhanced compiler, Dinkumware STL, and easy access to Boost, plus common libraries like SDL2, and many more.

Continuous Integration

Integrate with continuous build configurations quickly with MSBuild, CMake, and Ninja project support either as a lone developer or as part of a team.

Rapid Development

Award-winning visual design tools help you deliver projects 5x faster than competing solutions.

Windows 11

Modernize aging apps to support Windows 11 with up-to-date responsive controls and Windows Store support.

Productivity

VCL Styles with design-time support: Prototype stylish UIs even faster by seeing immediately at design-time how your styled forms and controls will look when running.

Remote Desktop

Collaborate more effectively with remote teams using improved remote desktop support for VCL and IDE.

High DPI & 4K

High-DPI support in the IDE, with full support for the latest 4k+ monitors, and cleaner and sharper fonts and icons throughout. Improved FMX High-DPI support for Windows and Desktop with a visibly superior desktop UI.

Accessible Data

Connect natively to over 20 databases like Oracle, SQL Server, MySQL and more with FireDAC's high speed direct access.

Version Control Integration

Track and manage changes using version control systems including Subversion, Git, and Mercurial repositories.

Responsive UIs

Create a single responsive platform-aware UI once and deploy on Windows and iOS.

Cloud Aware

C++Builder has an HTTP and a REST client library, available on all platforms, to invoke REST services and even specific AWS and Azure components.

Extend the IDE

Use plugins that add new tool windows, draw in the code editor, provide code completion, add new syntax highlighting, hook into high-level and low-level events, track processes and thread while debugging, and more.

iOS Applications

Develop applications for iOS quickly and easily with C++Builder's tools. iOS Simulator for macOS devices running on ARM-64 (M1 or M2 CPUs).
